Rationale for Methodology Change

Solactive has determined that for the indices to comply with SFDR requirements around good governance practices and improve conservation, companies missing critical ESG data are not eligible for selection. Involving the 4 datasets from Sustainalytics for screening purposes: Global Standards Screening (GSS), Controversy Score, ESG Risk Ratings (ESG RR), and various Product Involvement fields (PI), companies missing GSS, Controversy Score, ESG RR or all PI fields, would be removed from the eligible universe.

Changes to the Index Guideline

The following Methodology changes will be implemented in the following points of the Index Guideline:

2.2 SELECTION OF THE INDEX COMPONENTS

From (old version):

For the avoidance of doubt, companies not covered by Sustainalytics research under any of the above categories will remain eligible for selection in the INDEX.

To (new version):

Companies not covered by Sustainalytics research under any of the above categories will be ineligible for index selection.
